

Venlo, July 29th, 2026

Dear Madam, Sir,

For all rubber material provided by GMT Benelux, we have been anticipating providing the necessary documents for EUDR. The EU Deforestation Regulation product scope was updated earlier this month.

Articles of vulcanized rubber are removed from the scope of the regulation. The product scope of the Delegated Act has been updated accordingly.

As a result, the relevance of providing EUDR documents for our products no longer exists.

On the next page, you will find a link to the source and a screenshot on which the above is based.

Best regards,

Team GMT-Benelux

Commission updates product scope and digital tools to support implementation of EU Deforestation Regulation

The measures build on the legislative amendment agreed in December 2025 and are part of the simplification package presented in May 2026.

Targeted changes to the product scope

The Delegated Act updates Annex I of the EUDR, following stakeholder consultation and public feedback. It removes cattle hides, skins and leather, re-treaded tyres, soybeans for sowing, articles of vulcanised rubber, conveyor and transmission belts, and aircraft and motor vehicle seats from the scope of the Regulation.
